About the Authors

Preface

Math Essential 1: Units, Significant Figures, and Solving End of Chapter Problems

1 Fundamental Concepts of Thermodynamics

1.1 What Is Thermodynamics and Why Is It Useful?

1.2 The Macroscopic Variables Volume, Pressure, and Temperature

1.3 Basic Definitions Needed to Describe Thermodynamic Systems

1.4 Equations of State and the Ideal Gas Law

1.5 A Brief Introduction to Real Gases

Math Essential 2: Differentiation and Integration

2 Heat, Work, Internal Energy, Enthalpy, and the First Law of Thermodynamics

2.1 Internal Energy and the First Law of Thermodynamics

2.2 Heat

2.3 Work

2.4 Equilibrium, Change, and Reversibility

2.5 The Work of Reversible Compression or Expansion of an Ideal Gas

2.6 The Work of Irreversible Compression or Expansion of an Ideal Gas

2.7 Other Examples of Work

2.8 State Functions and Path Functions

2.9 Comparing Work for Reversible and Irreversible Processes

2.10 Changing the System Energy from a Molecular-Level Perspective

Table of Contents

2.11 Heat Capacity

2.12 Determining U and Introducing the State Function Enthalpy

2.13 Calculating q, w, U, and H for Processes Involving Ideal Gases

2.14 Reversible Adiabatic Expansion and Compression of an Ideal Gas

Math Essential 3: Partial Derivatives

3 The Importance of State Functions: Internal Energy and Enthalpy

3.1 Mathematical Properties of State Functions

3.2 Dependence of U on V and T

3.3 Does the Internal Energy Depend More Strongly on V or T?

3.4 Variation of Enthalpy with Temperature at Constant Pressure

3.5 How are C_p and C_v Related?

3.6 Variation of Enthalpy with Pressure at Constant Temperature

3.7 The Joule-Thomson Experiment

3.8 Liquefying Gases Using an Isenthalpic Expansion

4 Thermochemistry

4.1 Energy Stored in Chemical Bonds Is Released or Absorbed in Chemical Reactions

4.2 Internal Energy and Enthalpy Changes Associated with Chemical Reactions

4.3 Hess's Law Is Based on Enthalpy Being a State Function

4.4 Temperature Dependence of Reaction Enthalpies

4.5 Experimental Determination of U and H for Chemical Reactions

4.6 Differential Scanning Calorimetry

5 Entropy and the Second and Third Laws of Thermodynamics

5.1 What Determines the Direction of Spontaneous Change in a Process?

5.2 The Second Law of Thermodynamics, Spontaneity, and the Sign of ΔS

5.3 Calculating Changes in Entropy as T, P, or V Change

5.4 Understanding Changes in Entropy at the Molecular Level

5.5 The Clausius Inequality

5.6 The Change of Entropy in the Surroundings and $\Delta S_{\text{tot}} = \Delta S + \Delta S_{\text{sur}}$

5.7 Absolute Entropies and the Third Law of Thermodynamics

5.8 Standard States in Entropy Calculations

5.9 Entropy Changes in Chemical Reactions

5.10 Heat Engines and the Carnot Cycle

Table of Contents

5.11 How Does S Depend on V and T?

5.12 Dependence of S on T and P

5.13 Energy Efficiency, Heat Pumps, Refrigerators, and Real Engines

6 Chemical Equilibrium

6.1 Gibbs Energy and Helmholtz Energy

6.2 Differential Forms of U, H, A, and G

6.3 Dependence of Gibbs and Helmholtz Energies on P, V, and T

6.4 Gibbs Energy of a Reaction Mixture

6.5 Calculating the Gibbs Energy of Mixing for Ideal Gases

6.6 Calculating the Equilibrium Position for a Gas-Phase Chemical Reaction

6.7 Introducing the Equilibrium Constant for a Mixture of Ideal Gases

6.8 Calculating the Equilibrium Partial Pressures in a Mixture of Ideal Gases

6.9 Variation of K_p with Temperature

6.10 Equilibria Involving Ideal Gases and Solid or Liquid Phases

6.11 Expressing the Equilibrium Constant in Terms of Mole Fraction or Molarity

6.12 Expressing U, H, and Heat Capacities Solely in Terms of Measurable Quantities

6.13 A Case Study: The Synthesis of Ammonia

6.14 Measuring G for the Unfolding of Single RNA Molecules

7 The Properties of Real Gases

7.1 Real Gases and Ideal Gases

7.2 Equations of State for Real Gases and Their Range of Applicability

7.3 The Compression Factor

7.4 The Law of Corresponding States

7.5 Fugacity and the Equilibrium Constant for Real Gases

8 Phase Diagrams and the Relative Stability of Solids, Liquids, and Gases

8.1 What Determines the Relative Stability of the Solid, Liquid, and Gas Phases?

8.2 The Pressure-Temperature Phase Diagram

8.3 The Phase Rule

8.4 Pressure-Volume and Pressure-Volume-Temperature Phase Diagrams

8.5 Providing a Theoretical Basis for the PT Phase Diagram

8.6 Using the Clausius-Clapeyron Equation to Calculate Vapor Pressure as a Function of
T

8.7 Dependence of Vapor Pressure of a Pure Substance on Applied Pressure

Table of Contents

8.8 Surface Tension

8.9 Chemistry in Supercritical Fluids

8.10 Liquid Crystal Displays

9 Ideal and Real Solutions

9.1 Defining the Ideal Solution

9.2 The Chemical Potential of a Component in the Gas and Solution Phases

9.3 Applying the Ideal Solution Model to Binary Solutions

9.4 The TemperatureComposition Diagram and Fractional Distillation

9.5 The GibbsDuhem Equation

9.6 Colligative Properties

9.7 Freezing Point Depression and Boiling Point Elevation

9.8 Osmotic Pressure

9.9 Deviations from Raoults Law in Real Solutions

9.10 The Ideal Dilute Solution

9.11 Activities are Defined with Respect to Standard States

9.12 Henrys Law and the Solubility of Gases in a Solvent

9.13 Chemical Equilibrium in Solutions

9.14 Solutions Formed from Partially Miscible Liquids

9.15 SolidSolution Equilibrium

10 Electrolyte Solutions

10.1 Enthalpy, Entropy, and Gibbs Energy of Ion Formation in Solutions

10.2 Understanding the Thermodynamics of Ion Formation and Solvation

10.3 Activities and Activity Coefficients for Electrolyte Solutions

10.4 Calculating Using the DebyeHückel Theory

10.5 Chemical Equilibrium in Electrolyte Solutions

11 Electrochemical Cells, Batteries, and Fuel Cells

11.1 The Effect of an Electrical Potential on the Chemical Potential of Charged Species

11.2 Conventions and Standard States in Electrochemistry

11.3 Measurement of the Reversible Cell Potential

11.4 Chemical Reactions in Electrochemical Cells and the Nernst Equation

11.5 Combining Standard Electrode Potentials to Determine the Cell Potential

11.6 Obtaining Reaction Gibbs Energies and Reaction Entropies from Cell Potentials

11.7 Relationship Between the Cell Emf and the Equilibrium Constant

Table of Contents

11.8 Determination of E and Activity Coefficients Using an Electrochemical Cell

11.9 Cell Nomenclature and Types of Electrochemical Cells

11.10 The Electrochemical Series

11.11 Thermodynamics of Batteries and Fuel Cells

11.12 Electrochemistry of Commonly Used Batteries

11.13 Fuel Cells

11.14 Electrochemistry at the Atomic Scale

11.15 Using Electrochemistry for Nanoscale Machining

12 Probability

12.1 Why Probability?

12.2 Basic Probability Theory

12.3 Stirlings Approximation

12.4 Probability Distribution Functions

12.5 Probability Distributions Involving Discrete and Continuous Variables

12.6 Characterizing Distribution Functions

Math Essential 4: Lagrange Multipliers

13 The Boltzmann Distribution

13.1 Microstates and Configurations

13.2 Derivation of the Boltzmann Distribution

13.3 Dominance of the Boltzmann Distribution

13.4 Physical Meaning of the Boltzmann Distribution Law

13.5 The Definition of B

14 Ensemble and Molecular Partition Functions

14.1 The Canonical Ensemble

14.2 Relating Q to q for an Ideal Gas

14.3 Molecular Energy Levels

14.4 Translational Partition Function

14.5 Rotational Partition Function: Diatomic Molecules

14.6 Rotational Partition Function: Polyatomic Molecules

14.7 Vibrational Partition Function

14.8 The Equipartition Theorem

14.9 Electronic Partition Function

14.10 Review

Table of Contents

15 Statistical Thermodynamics

- 15.1 Energy
- 15.2 Energy and Molecular Energetic Degrees of Freedom
- 15.3 Heat Capacity
- 15.4 Entropy
- 15.5 Residual Entropy
- 15.6 Other Thermodynamic Functions
- 15.7 Chemical Equilibrium

16 Kinetic Theory of Gases

- 16.1 Kinetic Theory of Gas Motion and Pressure
- 16.2 Velocity Distribution in One Dimension
- 16.3 The Maxwell Distribution of Molecular Speeds
- 16.4 Comparative Values for Speed Distributions
- 16.5 Gas Effusion
- 16.6 Molecular Collisions
- 16.7 The Mean Free Path

17 Transport Phenomena

- 17.1 What Is Transport?
- 17.2 Mass Transport: Diffusion
- 17.3 Time Evolution of a Concentration Gradient
- 17.4 Statistical View of Diffusion
- 17.5 Thermal Conduction
- 17.6 Viscosity of Gases
- 17.7 Measuring Viscosity
- 17.8 Diffusion and Viscosity of Liquids
- 17.9 Ionic Conduction

18 Elementary Chemical Kinetics

- 18.1 Introduction to Kinetics
- 18.2 Reaction Rates
- 18.3 Rate Laws
- 18.4 Reaction Mechanisms
- 18.5 Integrated Rate Law Expressions
- 18.6 Numerical Approaches

Table of Contents

- 18.7 Sequential First-Order Reactions
- 18.8 Parallel Reactions
- 18.9 Temperature Dependence of Rate Constants
- 18.10 Reversible Reactions and Equilibrium
- 18.11 Perturbation-Relaxation Methods
- 18.12 The Autoionization of Water: A Temperature-Jump Example
- 18.13 Potential Energy Surfaces
- 18.14 Activated Complex Theory
- 18.15 Diffusion-Controlled Reactions

19 Complex Reaction Mechanisms

- 19.1 Reaction Mechanisms and Rate Laws
- 19.2 The Preequilibrium Approximation
- 19.3 The Lindemann Mechanism
- 19.4 Catalysis
- 19.5 Radical-Chain Reactions
- 19.6 Radical-Chain Polymerization
- 19.7 Explosions
- 19.8 Feedback, Nonlinearity, and Oscillating Reactions
- 19.9 Photochemistry
- 19.10 Electron Transfer

20 Macromolecules

- 20.1 What Are Macromolecules?
- 20.2 Macromolecular Structure
- 20.3 Random-Coil Model
- 20.4 Biological Polymers
- 20.5 Synthetic Polymers
- 20.6 Characterizing Macromolecules
- 20.7 Self-Assembly, Micelles, and Biological Membranes

Appendix A Data Tables
