Preface

Your work...

With the Power of Mastering Engineering for Fluid Mechanics

Credits

Contents

Chapter 1. Fundamental Concepts

Chapter Objectives

1.1 Introduction

1.2 Characteristics of Matter

1.3 Systems of Units

1.4 Calculations

1.5 Problem Solving

1.6 Some Basic Fluid Properties

1.7 Viscosity

1.8 Viscosity Measurement

1.9 Vapor Pressure

1.10 Surface Tension and Capillarity

Table of Contents

References

Problems

Conceptual Problems

Chapter Review

Chapter 2. Fluid Statics

Chapter Objectives

2.1 Pressure

2.2 Absolute and Gage Pressure

2.3 Static Pressure Variation

2.4 Pressure Variation for Incompressible Fluids

2.5 Pressure Variation for Compressible Fluids

2.6 Measurement of Static Pressure

2.7 Hydrostatic Force on a Plane Surface Formula Method

2.8 Hydrostatic Force on a Plane Surface Geometrical Method

2.9 Hydrostatic Force on a Plane Surface Integration Method

2.10 Hydrostatic Force on an Inclined Plane or Curved Surface

2.11 Buoyancy

2.12 Stability

2.13 Constant Translational Acceleration of a Liquid

2.14 Steady Rotation of a Liquid

References

Fundamental Problems

Problems

Conceptual Problems

Chapter Review

Chapter 3. Kinematics of Fluid Motion

Chapter Objectives

Table of Contents

3.1 Graphical Descriptions of Fluid Flow

3.2 Velocity

3.3 Fluid Acceleration

3.4 Streamline Coordinates

References

Fundamental Problems

Problems

Chapter Review

Chapter 4. Flow and the Conservation of Mass

Chapter Objectives

4.1 Volumetric Flow, Mass Flow, and Average Velocity

4.2 Flow Classification

4.3 Finite Control Volumes

4.4 The Reynolds Transport Theorem

4.5 Conservation of Mass

References

Fundamental Problems

Problems

Conceptual Problems

Chapter Review

Chapter 5. Work and Energy

Chapter Objectives

5.1 Euler's Equations of Motion

5.2 The Bernoulli Equation

5.3 Applications of the Bernoulli Equation

5.4 Energy and Hydraulic Grade Lines

5.5 The Energy Equation

Table of Contents

References

Fundamental Problems

Problems

Chapter Review

Chapter 6. Fluid Momentum

Chapter Objectives

6.1 The Linear Momentum Equation

6.2 Applications to Bodies at Rest

6.3 Applications to Bodies Having Constant Velocity

6.4 The Angular Momentum Equation

6.5 Propellers and Wind Turbines

6.6 Applications for Control Volumes Having Accelerated Motion

6.7 Turbojets and Turbofans

6.8 Rockets

References

Fundamental Problems

Problems

Conceptual Problems

Chapter Review

Chapter 7. Differential Fluid Flow

Chapter Objectives

7.1 Differential Analysis

7.2 Kinematics of Differential Fluid Elements

7.3 Circulation and Vorticity

7.4 Conservation of Mass

7.5 Equations of Motion for a Fluid Particle

7.6 The Euler and Bernoulli Equations

Table of Contents

- 7.7 Potential Flow Hydrodynamics
- 7.8 The Stream Function
- 7.9 The Potential Function
- 7.10 Basic Two-Dimensional Flows
- 7.11 Superposition of Flows
- 7.12 The NavierStokes Equations
- 7.13 Computational Fluid Dynamics
- References
- Problems
- Chapter Review

Chapter 8. Dimensional Analysis and Similitude

- Chapter Objectives
- 8.1 Dimensional Analysis
- 8.2 Important Dimensionless Numbers
- 8.3 The Buckingham Pi Theorem
- 8.4 Some General Considerations Related to Dimensional Analysis
- 8.5 Similitude
- References
- Problems
- Chapter Review

Chapter 9. Viscous Flow within Enclosed Conduits

- Chapter Objectives
- 9.1 Steady Laminar Flow between Parallel Plates
- 9.2 NavierStokes Solution for Steady Laminar Flow between Parallel Plates
- 9.3 Steady Laminar Flow within a Pipe
- 9.4 NavierStokes Solution for Steady Laminar Flow within a Pipe
- 9.5 The Reynolds Number

Table of Contents

9.6 Fully Developed Flow from an Entrance

9.7 Laminar and Turbulent Shear Stress within a Pipe

9.8 Steady Turbulent Flow within a Pipe

References

Problems

Chapter Review

Chapter 10. Analysis and Design for Pipe Flow

Chapter Objectives

10.1 Resistance to Flow in Pipes

10.2 Losses Occurring from Pipe Fittings and Transitions

10.3 Single-Pipeline Flow

10.4 Pipe Systems

10.5 Flow Measurement

References

Fundamental Problems

Problems

Chapter Review

Chapter 11. Viscous Flow over External Surfaces

Chapter Objectives

11.1 The Concept of the Boundary Layer

11.2 Laminar Boundary Layers

11.3 The Momentum Integral Equation

11.4 Turbulent Boundary Layers

11.5 Laminar and Turbulent Boundary Layers

11.6 Drag and Lift

11.7 Pressure Gradient Effects

11.8 The Drag Coefficient

Table of Contents

11.9 Drag Coefficients for Bodies Having Various Shapes

11.10 Methods for Reducing Drag

11.11 Lift and Drag on an Airfoil

References

Problems

Conceptual Problems

Chapter Review

Chapter 12. Open-Channel Flow

Chapter Objectives

12.1 Types of Flow in Open Channels

12.2 Open-Channel Flow Classifications

12.3 Specific Energy

12.4 Open-Channel Flow over a Rise or Bump

12.5 Open-Channel Flow under a Sluice Gate

12.6 Steady Uniform Channel Flow

12.7 Gradually Varied Flow

12.8 The Hydraulic Jump

12.9 Weirs

References

Problems

Chapter Review

Chapter 13. Compressible Flow

Chapter Objectives

13.1 Thermodynamic Concepts

13.2 Wave Propagation through a Compressible Fluid

13.3 Types of Compressible Flow

13.4 Stagnation Properties

Table of Contents

13.5 Isentropic Flow through a Variable Area
13.6 Isentropic Flow through Converging and Diverging Nozzles
13.7 The Effect of Friction on Compressible Flow
13.8 The Effect of Heat Transfer on Compressible Flow
13.9 Normal Shock Waves
13.10 Shock Waves in Nozzles
13.11 Oblique Shock Waves
13.12 Compression and Expansion Waves
13.13 Compressible Flow Measurement
References
Problems
Chapter Review

Chater 14. Turbomachines

Chapter Objectives
14.1 Types of Turbomachines
14.2 Axial-Flow Pumps
14.3 Radial-Flow Pumps
14.4 Ideal Performance for Pumps
14.5 Turbines
14.6 Pump Performance
14.7 Cavitation and the Net Positive Suction Head
14.8 Pump Selection Related to the Flow System
14.9 Turbomachine Similitude
References
Problems
Chapter Review

Appendices

Table of Contents

Appendix A. Physical Properties of Fluids

Appendix B. Compressible Properties of a Gas ($k = 1.4$)

Fundamental Problem Solutions

Answers to Selected Problems

Index

Fundamental Equations of Fluid Mechanics

SI Prefixes and Conversion Factors

Geometric Properties of a Planar Area

Surface Roughness for New Pipe
