Preface

Your work...

With the Power of Mastering Engineering for Statics and Mechanics of
Materials

Contents

Credits

Chapter 1. General Principles

Chapter Objectives

1.1 Mechanics

1.2 Fundamental Concepts

1.3 The International System of Units

1.4 Numerical Calculations

1.5 General Procedure for Analysis

Chapter 2. Force Vectors

Chapter Objectives

2.1 Scalars and Vectors

2.2 Vector Operations

Table of Contents

- 2.3 Vector Addition of Forces
- 2.4 Addition of a System of Coplanar Forces
- 2.5 Cartesian Vectors
- 2.6 Addition of Cartesian Vectors
- 2.7 Position Vectors
- 2.8 Force Vector Directed Along a Line
- 2.9 Dot Product
- Chapter Review
- Review Problems

Chapter 3. Force System Resultants

- Chapter Objectives
- 3.1 Moment of a ForceScalar Formulation
- 3.2 Principle of Moments
- 3.3 Cross Product
- 3.4 Moment of a ForceVector Formulation
- 3.5 Moment of a Force about a Specified Axis
- 3.6 Moment of a Couple
- 3.7 Simplification of a Force and Couple System
- 3.8 Further Simplification of a Force and Couple System
- 3.9 Reduction of a Simple Distributed Loading
- Chapter Review
- Review Problems

Chapter 4. Equilibrium of a Rigid Body

- Chapter Objectives
- 4.1 Conditions for Rigid-Body Equilibrium
- Equilibrium in two Dimensions
- 4.2 Free-Body Diagrams

Table of Contents

- 4.3 Equations of Equilibrium
- 4.4 Two- and Three-Force Members
- Equilibrium in three Dimensions
- 4.5 Free-Body Diagrams
- 4.6 Equations of Equilibrium
- 4.7 Characteristics of Dry Friction
- 4.8 Problems Involving Dry Friction
- Chapter Review
- Review Problems

Chapter 5. Structural Analysis

- Chapter Objectives
- 5.1 Simple Trusses
- 5.2 The Method of Joints
- 5.3 Zero-Force Members
- 5.4 The Method of Sections
- 5.5 Frames and Machines
- Chapter Review
- Review Problems

Chapter 6. Center of Gravity, Centroid, and Moment of Inertia

- Chapter Objectives
- 6.1 Center of Gravity and the Centroid of a Body
- 6.2 Composite Bodies
- 6.3 Moments of Inertia for Areas
- 6.4 Parallel-Axis Theorem for an Area
- 6.5 Moments of Inertia for Composite Areas
- Chapter Review

Chapter 7. Stress and Strain

Table of Contents

Chapter Objectives

7.1 Introduction

7.2 Internal Resultant Loadings

7.3 Stress

7.4 Average Normal Stress in an Axially Loaded Bar

7.5 Average Shear Stress

7.6 Allowable Stress Design

7.7 Deformation

7.8 Strain

Chapter Review

Review Problems

Chapter 8. Mechanical Properties of Materials

Chapter Objectives

8.1 The Tension and Compression Test

8.2 The StressStrain Diagram

8.3 StressStrain Behavior of Ductile and Brittle Materials

8.4 Strain Energy

8.5 Poissons Ratio

8.6 The Shear StressStrain Diagram

Chapter Review

Review Problems

Chapter 9. Axial Load

Chapter Objectives

9.1 Saint-Venants Principle

9.2 Elastic Displacement of an Axially Loaded Member

9.3 Principle of Superposition

9.4 Statically Indeterminate Axially Loaded Members

Table of Contents

9.5 The Force Method of Analysis for Axially Loaded Members

9.6 Thermal Stress

9.7 Stress Concentrations

Chapter Review

Review Problems

Chapter 10. Torsion

Chapter Objectives

10.1 Torsional Deformation of a Circular Shaft

10.2 The Torsion Formula

10.3 Power Transmission

10.4 Angle of Twist

10.5 Statically Indeterminate Torque-Loaded Members

*10.6 Solid Noncircular Shafts

10.7 Stress Concentration

Chapter Review

Review Problems

Chapter 11. Bending

Chapter Objectives

11.1 Internal Loading as a Function of Position

11.2 Graphical Method for Constructing Shear and Moment Diagrams

11.3 Bending Deformation of a Straight Member

11.4 The Flexure Formula

11.5 Unsymmetric Bending

11.6 Stress Concentrations

Chapter Review

Review Problems

Chapter 12. Transverse Shear

Table of Contents

Chapter Objectives

12.1 Shear in Straight Members

12.2 The Shear Formula

12.3 Shear Flow in Built-Up Members

Chapter Review

Review Problems

Chapter 13. Combined Loadings

Chapter Objectives

13.1 Thin-Walled Pressure Vessels

13.2 State of Stress Caused by Combined Loadings

Chapter Review

Review Problems

Chapter 14. Stress and Strain Transformation

Chapter Objectives

14.1 Plane-Stress Transformation

14.2 General Equations of Plane Stress Transformation

14.3 Principal Stresses and Maximum In-Plane Shear Stress

14.4 Mohr's CirclePlane Stress

14.5 Absolute Maximum Shear Stress

14.6 Plane Strain

14.7 General Equations of Plane-Strain Transformation

14.8 Mohr's CirclePlane Strain

*14.9 Absolute Maximum Shear Strain

14.10 Strain Rosettes

14.11 Material Property Relationships

Chapter Review

Review Problems

Table of Contents

Chapter 15. Design of Beams and Shafts

Chapter Objectives

15.1 Basis for Beam Design

15.2 Prismatic Beam Design

Chapter Review

Chapter 16. Deflection of Beams and Shafts

Chapter Objectives

16.1 The Elastic Curve

16.2 Slope and Displacement by Integration

* 16.3 Discontinuity Functions

16.4 Method of Superposition

16.5 Statically Indeterminate Beams and ShaftsMethod of Superposition

Chapter Review

Review Problems

Chapter 17. Buckling of Columns

Chapter Objectives

17.1 Critical Load

17.2 Ideal Column with Pin Supports

17.3 Columns Having Various Types of Supports

*17.4 The Secant Formula

Chapter Review

Review Problems

Appendices

Appendix A. Mathematical Review and Expressions

Appendix B. Geometric Properties of an Area and Volume

Appendix C. Geometric Properties of Structural Shapes

Appendix D. Slopes and Deflections of Beams

Table of Contents

Fundamental Problem Solutions

Answers to Selected Problems

Index

Fundamental Equations of Statics and Mechanics of Materials

Average Mechanical Properties of Typical Engineering Materials
