Contents
Introduction
Part 1: Programming fundamentals
- 1 Starting out
  - Building a place to work
  - Getting the tools and demos
  - Using the tools
    - Visual Studio projects and solutions
    - Running a program with Visual Studio
    - Stopping a program running in Visual Studio
    - The MyProgram application
  - What you have learned
- 2 What is programming?
  - What makes a programmer?
    - Programming and party planning
    - Programming and problems
    - Programmers and people
  - Computers as data processors
    - Machines and computers and us
    - Making programs work
    - Programs as data processors
  - Data and information

Pearson

# Table of Contents

- What you have learned

## 3 Writing programs

- C# program structure
  - Identify resources
  - Start a class definition
  - Declare the StartProgram method
  - Set the title and display a message
- Extra Snaps
  - SpeakString
- Creating new program files
- Extra Snaps
  - Delay
  - SetTextColor
  - SetTitleColor
  - SetBackgroundColor
- Creating your own colors
- What you have learned

## 4 Working with data in a program

- Starting with variables
  - Variables and computer storage
  - Declaring a variable
  - Simple assignment statements
- Using a variable in a program
  - Assigning values in a declaration
  - Adding strings together
- Working with numbers
  - Whole numbers and real numbers
  - Performing calculations
- Working with different types of data
  - Converting numbers into text
- Whole numbers and real numbers in programs

# Table of Contents

Variable types and expressions

Precision and accuracy

Converting types by casting

Using casting on operands in an expression

Types and errors

Extra Snaps

Weather snaps

ThrowDice

What you have learned

5 Making decisions in a program

Understanding the Boolean type

Declaring a Boolean variable

Boolean expressions

Using if constructions and operators

Relational operators

Equality operators

Comparing strings

Creating blocks of statements

Local variables in blocks of code

Creating complex conditions using logical operators

Working with logic

Adding comments to make a program clearer

Funfair rides and programs

Reading in numbers

Building logic using if conditions

Completing the program

Working with program assets

Asset management in Visual Studio

Playing sound assets

Displaying image content

What you have learned

# Table of Contents

6 Repeating actions with loops

- Using a loop to make a pizza picker
  - Counting selections
  - Displaying the totals
  - Getting user options
  - Adding a while loop
- Performing input validation with a while loop
- Using Visual Studio to follow the execution of your programs
- Counting in a loop to make a times-table tutor
- Using a for loop construction
- Breaking out of loops
- Going back to the top of a loop by using continue
- Extra Snaps
  - Voice input
  - Secret data entry
- What you have learned

7 Using arrays

- Have an ice cream
  - Storing the data in single variables
- Making an array
  - Using an index
  - Working with arrays
  - Displaying the contents of the array by using a for loop
  - Displaying a user menu
  - Sorting an array using the Bubble Sort
  - Finding the highest and lowest sales values
  - Working out the total and the average sales
  - Completing the program
- Multiple dimensions in arrays
  - Using nested for loops to work with two-dimensional arrays
  - Making test versions of programs

# Table of Contents

Finding the length of an array dimension

Using arrays as lookup tables

What you have learned

Part 2: Advanced programming

8 Using methods to simplify programs

What makes a method?

Adding a method to a class

Feeding information to methods by using parameters

Returning values from method calls

Making a tiny contacts app

Reading in contact details

Storing contact information

Using Windows local storage

Using reference parameters to deliver results from a method call

Displaying the contact details

Adding IntelliSense comments to your methods

What you have learned

9 Creating structured data types

Storing music notes by using a structure

Creating and declaring a structure

Creating arrays of structure values

Structures and methods

Constructing structure values

Making a music recorder

Creating preset arrays

Objects and responsibilities: Making a SongNote play itself

Protecting values held in a structure

Making a drawing program with Snaps

Drawing dots on the screen

Using the DrawDot Snap to draw a dot on the screen

The SnapsCoordinate structure

# Table of Contents

Using the GetDraggedCoordinate Snap to detect a drawing position

Using the SetDrawingColor Snap to set the drawing color

Using the ClearGraphics Snap to clear the screen

The SnapsColor structure

Creating enumerated types

Making decisions with the switch construction

Extra Snaps

GetTappedCoordinate

DrawLine

GetScreenSize

PickImage

What you have learned

10 Classes and references

Making a time tracker

Creating a structure to hold contact information

Using the this reference when working with objects

Managing lots of contacts

Making test data

Designing the Time Tracker user interface

Structuring the Time Tracker program

Creating a new contact

Finding customer details

Adding minutes to a contact

Display a summary

Structures and classes

Sorting and structures

Sorting and references

Reference and value types

References and assignments

Classes and constructors

Arrays of class references

From arrays to lists

# Table of Contents

Working through lists of data

Lists and the index value

Lists of structures

Storing data using JSON

The Newtonsoft JSON library

Storing and recovering lists

Fetching data using XML

What you have learned

11 Making solutions with objects

Creating objects with integrity

Protecting data held inside an object

Providing Get and Set methods for private data

Providing methods that reflect the use of an object

Using properties to manage access to data

Using properties to enforce business rules

Managing the object construction process

Catching and dealing with exceptions

Creating user-friendly applications

Saving drawings in files

SaveGraphicsImageToFileAsPNG

SaveGraphicsImageToLocalStoreAsPNG

LoadGraphicsPNGImageFromLocalStore

The DateTime structure

Getting the current date and time

Fading date and time displays

Using the date and time to make a file name

Creating a Drawing class

Creating a list of drawings

Making the drawing diary methods

What you have learned

Part 3: Making games

Pearson

# Table of Contents

12 What makes a game?

- Creating a video game
  - Games and game engines
  - Games and sprites
- What you have learned

13 Creating gameplay

- Creating a player-controlled paddle
- Adding sound to games
- Displaying text in a game
  - Making a complete game
- What you have learned

14 Games and object hierarchies

- Games and objects: Space Rockets in Space
  - Constructing a star sprite that moves
  - Allowing methods to be overridden
  - Creating a moving star field
  - Creating a rocket based on a MovingSprite
  - Adding some aliens
- Designing a class hierarchy
- What you have learned

15 Games and software components

- Games and objects
  - Creating cooperating objects
  - Objects and state
  - Interfaces and components
- What you have learned
