Cisco IOS XR Fundamentals

Table of Contents

Contents
Foreword
Introduction
Chapter 1 Introducing Cisco IOS XR
- Evolution of Networking
- Requirements for Carrier-Grade NOS
  - Convergence
  - Scalability
  - Availability
  - Hardware Redundancy
  - Failure Recovery and Microkernel-Based NOS
  - Process Restartability
  - Failure Detection
  - Software Upgrades and Patching
  - Security
  - Service Flexibility
- Operating System Concepts
  - Basic Functions of an Operating System
  - Process Scheduling
  - Interrupt Handling
  - Memory Management
  - Synchronization
  - Interprocess Communication
  - Dynamic Link Library
  - Portable Operating System Interface

Table of Contents

- High-Level Overview of Cisco IOS XR
- Cisco IOS XR Platforms
  - Cisco CRS-1 Carrier Routing System
  - Cisco XR 12000 Series
  - Cisco ASR 9000 Series

Chapter 2 Cisco IOS XR Infrastructure

- Cisco IOS XR Kernel
  - Threads
  - Scheduling Algorithms
  - Synchronization Services
- Cisco IOS XR System Manager
  - Process Attributes
  - System Manager and Process Lifecycle
  - CLI for Sysmgr and Processes
- Interprocess Communication
  - Characteristics of IPC Mechanisms
  - Synchronous Versus Asynchronous
  - Intra-node Versus Inter-node
  - Connection-Oriented Versus Rendezvous
  - Point-to-Point Versus Point-to-Multipoint
  - Light Weight Messaging
  - Group Service Protocol
  - Atomic Descriptor Ring
  - Qnet
- Distributed Services
  - GSP
  - Bulk Content Downloader
- Process Placement
- Cisco IOS XR System Database

Table of Contents

- High Availability Architecture
- Forwarding Path

Chapter 3 Installing Cisco IOS XR

- Introduction to Cisco IOS XR Packages
  - Image Naming Conventions
  - Cisco IOS XR Bootable Files, PIEs, and SMUs
  - Composite Bootable Files
  - Composite Upgrade PIE
  - Optional PIEs
  - Software Maintenance Upgrade
- Install System Overview
- Preparing to Install Cisco IOS XR
- TURBOBOOT
  - Setting the TURBOBOOT ROMMON Variable
  - Booting the .vm File from ROMMON
  - Verifying the Software Installation
  - Installing Packages
  - TURBOBOOT Considerations for the c12000 Platform
  - Booting the Standby RP
- Upgrading to a Major Cisco IOS XR Version Using mini.pie
  - Install Rollback
  - Removing Inactive Packages
  - Performing an Install Audit
- Disk Backup and Recovery
  - Creating a Backup Disk with Golden Disk
  - Disk Mirroring
  - Creating a Disk Partition
  - Turning On Disk Mirroring
- Install Health Checks

Table of Contents

Verifying MD5 Signature of a PIE or an SMU

Anticipating Disk Space Usage

Testing a PIE or SMU Installation

Verifying the config-register

Clearing Configuration Inconsistency

Chapter 4 Configuration Management

Understanding Distributed Configuration Management

Control Plane Configuration Management

Data Plane Configuration Management

Understanding Configuration Planes

Admin Plane

Shared Plane

Local Plane

Components of Configuration Management

Configuration Manager

Configuration File System

Role of SysDB in Configuration Management

Replicated Data Service File System

Understanding the Two-Stage Commit Model

Building the Target Configuration

Commit Operation

Commit Confirmed Option

Commit Failures

Configuration Failures During Startup

Configuration Features in Cisco IOS XR

Deleting Physical Interface

Configuration Navigation

Default Running Configuration Behavior

Troubleshooting Configuration Inconsistencies

Table of Contents

Configuration Session Lock

Avoiding a Commit Operation and Clearing the Target Configurations

Option 1: Unlock the Configuration Session

Option 2: Use the clear Command

Option 3: Use the abort Command

Option 4: Use the end or exit Commands

Configuration Management During Hardware and Software Change Events

Configuration Management During Online Insertion and Removal Events

Case 1: Insert or Remove a Node

Case 2: Replace the Node with a Different Node

Case 3: Replace the Node with a Higher Density Node

Case 4: Replace the Node with a Lower Density Node

Configuration Management During Package Activation and Deactivation

Interface Preconfiguration

Configuration Template

Configuration Management During Router Startup

Configuration Rollback

Chapter 5 Cisco IOS XR Monitoring and Operations

Using SNMP

Configuring SNMP

Cisco IOS XR Syslog

SNMP in the Context of a VRF

Logging Destination

Local Archiving of Logging Messages

Embedded Event Manager

EEM Event Detectors and Events Processing

Timer Services Event Detector

Syslog Event Detector

Table of Contents

None Event Detector

Watchdog System Monitor Event Detector

Distributed Event Detectors

Registering and Using Onboard EEM Policies

User-Defined EEM Policy

EEM Reliability Metrics

Monitoring Processes

WDSYSMON

Monitoring Memory

Using the show system verify Command

Operations and Monitoring Best Practices

Chapter 6 Cisco IOS XR Security

Secure Operating System

Securing Access to the Router

Admin Plane

SDR Plane

User Groups and Task Groups

User Group and Task Group Inheritance

External AAA

Configuring a TACACS+ Server

Authentication Using RADIUS

Configuring Secure Shell

Management Plane Protection

Securing the Forwarding Plane

Access Control Lists

Unicast RPF

Local Packet Transport Service

Mechanics Behind LPTS: A High-Level Overview

Configuring LPTS

Table of Contents

Chapter 7 Routing IGP

Routing Information Protocol

Understanding RIP Fundamentals

RIP Versions

Configuring RIP in Cisco IOS XR

Configuring Route Policy Language

Configuring Passive Interface

Restarting, Shutting Down, and Blocking RIP

Verifying and Troubleshooting RIP

Enhanced Interior Gateway Routing Protocol

Understanding EIGRP Fundamentals

Neighbor Discovery/Recovery

Reliable Transport Protocol

Diffusing Update Algorithm

Protocol-Dependent Modules

Configuring EIGRP in Cisco IOS XR

Configuring Routing Policy

Configuring Router ID

Configuring and Verifying NSF

Verifying EIGRP Process Status

Verifying and Troubleshooting EIGRP

Open Shortest Path First

Understanding OSPF Fundamentals

Configuring OSPF in Cisco IOS XR

Configuring and Verifying OSPFv2

Hierarchical CLI and Inheritance

Configuring OSPFv2 Authentication

Verifying NSF Configuration and Standby RP Status

Configuring and Verifying Nonstop Routing

Configuring and Verifying Multiarea Adjacencies

Table of Contents

Configuring and Verifying Bidirectional Forwarding Detection
Configuring OSPF Timers
Configuring and Verifying OSPFv3
Intermediate System to Intermediate System
Understanding IS-IS Fundamentals
Configuring IS-IS in Cisco IOS XR
Verifying the Single Topology Model
Configuring and Verifying the Multitopology Model
Configuring and Verifying Interface States
Configuring IS-IS NSF and IS-IS Timers
Configuring and Verifying BFD in IS-IS
Configuring and Verifying IP Fast Reroute
Configuring and Verifying Authentication in IOS XR IS-IS
Chapter 8 Implementing BGP in Cisco IOS XR
Cisco IOS XR BGP Architectural Overview
Cisco IOS XR BGP Hierarchical Configuration
Address Family Configuration Mode
Configuration Groups
Implementing BGP Policies
Routing Policy Language
Prefix Set
AS-path Set
Community Set
Routing Policies
Hierarchical Policies and Parameterization
BGP Policy Accounting
BGP Remotely Triggered Black Hole
BGP Graceful Restart
BGP Distributed Speaker

Table of Contents

Cisco IOS XR BGP Convergence

Chapter 9 Cisco IOS XR MPLS Architecture

Understanding Cisco IOS XR MPLS Architecture Fundamentals

TTL Processing

Cisco IOS XR MPLS Load Balancing

Label Distribution Protocol

LDP Basic Configuration

LDP Parameters

LDP Label Control

LDP-IGP Sync and LDP Session Protection

MPLS Traffic Engineering

Cisco IOS XR Peer-to-Peer L3VPN

Virtual Routing Forwarding Tables

MP-iBGP Between PE Routers

Routing Between CE and PE

Static Routing for CE-PE

eBGP as CE-PE Protocol

OSPF as CE-PE Protocol

RIP as CE-PE Protocol

L2VPN

Virtual Private Wire Service

VPWS Configuration in IOS XR

Pseudo Wire Redundancy

Virtual Private VLAN Service

Chapter 10 Cisco IOS XR Multicast

Understanding Multicast Routing Fundamentals

Internet Group Management Protocol

IGMPv2

IGMPv3

Table of Contents

Protocol Independent Multicast

Understanding Cisco IOS XR Multicast

Understanding Cisco IOS XR PIM Sparse Mode

Understanding PIM Source Specific Multicast on IOS XR

Configuring Cisco IOS XR Multicast

Enabling Multicast Routing

Configuring IGMP

Configuring PIM

Configuring Static RP

Auto-RP

BSR

PIM SSM Configuration

Monitoring and Troubleshooting Cisco IOS XR Multicast

Debugging Multicast on the CRS Router's Ingress Path

Debugging Multicast in Router's Fabric and Egress Path

Debugging an RPF Failure Using a Line Card MFIB Command

Chapter 11 Secure Domain Router

Owner and Non-Owner SDR

Understanding SDR Privileges

Creating a Secure Domain Router

DRP

Configuring a Secure Domain Router

Creating a Named Secure Domain Router

Assigning Resources to a Named SDR

Logging In to a Newly Named SDR

Process Placement

Chapter 12 Understanding CRS-1 Multishelf

Multishelf Overview

Table of Contents

- Line Card Chassis
- Fabric Card Chassis
- Switch Fabric Cards
  - Fabric Data Path
  - High Availability
- Multishelf Fabric Interconnect
  - Fabric Planes
  - SEA Links
  - Fabric Backpressure
  - Optical Array Cables
  - Recommended Practices and Considerations
  - Single Module Fabric Configuration
  - Multimodule Configuration
- Multishelf Control Ethernet
- Multishelf Configuration
  - Viewing the Configuration
  - Line Card Chassis to Multishelf Preparation
  - Troubleshooting Multishelf Fabric Planes
  - Troubleshooting Fabric Links

Appendix A: ROMMON and Configuration Register Settings

Appendix B: Multishelf 2+1 Array Cable Mapping

Appendix C: Switch Fabric Down Flags

Index
